SodaClean “Maintenance Plus” Receives Certification from the Organic Material Research Institute (OMRI) as Biodegradable

HOUSTON, TX – October 2009 – SodaBlasting has been a well established method for the Mold Remediation Industry for years. **FMC Industrial Chemical certifies SodaClean is microbe free – but more importantly – will not support microbial growth.** This is huge news for mold remediators across the globe.

Just as important, SodaClean is “green.” The OMRI (Organic Material Research Institute) has certified SodaBlast’s SodaClean “Maintenance Plus” compound as biodegradable. It is USDA compliant as an A-1 cleaner for meat and poultry operations, GRAS (Generally Recognized as Safe) per the FDA Code of Federal Regulations, certified by the Orthodox Union for Passover and year round use as Kosher, meets Food Chemical Codex requirements as a food-grade product, and standards for purity as specified by the US Pharmacopoeia.

SodaClean Maintenance Plus, exclusive to SodaBlast Systems, is specially formulated for blasting, while SodaBlast equipment is specially designed to save you 30% of your blasting media. So you save money by using less material and prevent mold from growing.

SodaBlast Systems has been building blasters for over 63 years in America, and is the world’s largest manufacturer of SodaBlast equipment. Find out more at www.sodablastsystems.com or call 800-216-SODA.
