Trust your 'baby' to the best – SodaBlast Systems - a faster, GREENER option to Paint Removal

Let's face it...your car is your baby. Restoring it is an art. It begins with the delicate and time consuming job of paint removal. Don't expose yourself to harmful chemicals or spend hours upon back-breaking hours sanding when you have a greener, faster choice – SodaBlast Systems.

SodaBlast Systems introduces the LV series of affordable options starting at only \$2,995. SodaBlasting has become the choice of many custom painters and restorers. This system is a non-abrasive paint and coating removal method which can be safely used on almost all surfaces.

Strip your car in a fraction of the time of traditional methods. SodaBlast strips an entire car in a matter of hours depending on the model you choose! This process will not warp or etch metal, scratch chrome or damage glass. The SodaBlaster is environmentally friendly, water soluble and preserves the integrity of the metal with no 'signature' on the surface. No masking of glass or rubber is necessary, and you choose the best abrasive for your application.

Unlike conventional gravity-fed equipment, the SodaBlast System design differs in that it pulls the abrasive media from the top. This keeps the machine from getting clogged as there is constant abrasive discharge and positive abrasive control. This difference in design keeps your SodaBlaster trouble-free, worry-free and efficient.

Whether this is your hobby or your profession, SodaBlast Systems has a model for every budget, and gives you a unique way to also generate more income by offering blasting services. To find out more, log on to **www.sodablastsystems.com** or call them at **800-216-SODA**.
