

## For Immediate Release

### PAINT STRIPPING THE 'GREEN' WAY FROM SODABLAST SYSTEMS

**HOUSTON, TX – September 2009** – From blasting paint off a panel in minutes to an entire car in less than a day, SodaBlast systems can save you time and earn you money. SodaBlasting has become the choice of many custom painters and restorers. As seen here, metal, plastic and even fiberglass parts are stripped clean in minutes with SodaBlast Systems.

SodaBlast Systems will not warp or etch metal, scratch chrome or damage glass. The SodaBlaster is environmentally friendly, water soluble and preserves the integrity of the metal with no "signature" on the surface. This system is a non-abrasive paint and coating removal method which can be safely used on almost all surfaces. No masking of glass or rubber is necessary.

Unlike conventional gravity-fed equipment, SodaBlast Systems' design differs in that it pulls the abrasive media from the top. This keeps the machine from getting clogged as there is constant abrasive discharge and positive abrasive control. This difference in design keeps your SodaBlaster trouble-free, worry-free and efficient.

Leading the blasting market for over six decades, SodaBlast Systems is family owned and proudly made in America. Generate more profits by owning a SodaBlast Systems. To find out more, log on to [www.sodablastsystems.com](http://www.sodablastsystems.com) or call them at 800-216-SODA. **See their full line at the SEMA Show – 24388 in the Restoration Marketplace.**
